

# REPORT CARD GENERATOR

This GUI application will generate the student report card based on the data provided in Dummy Data.xlsx file.

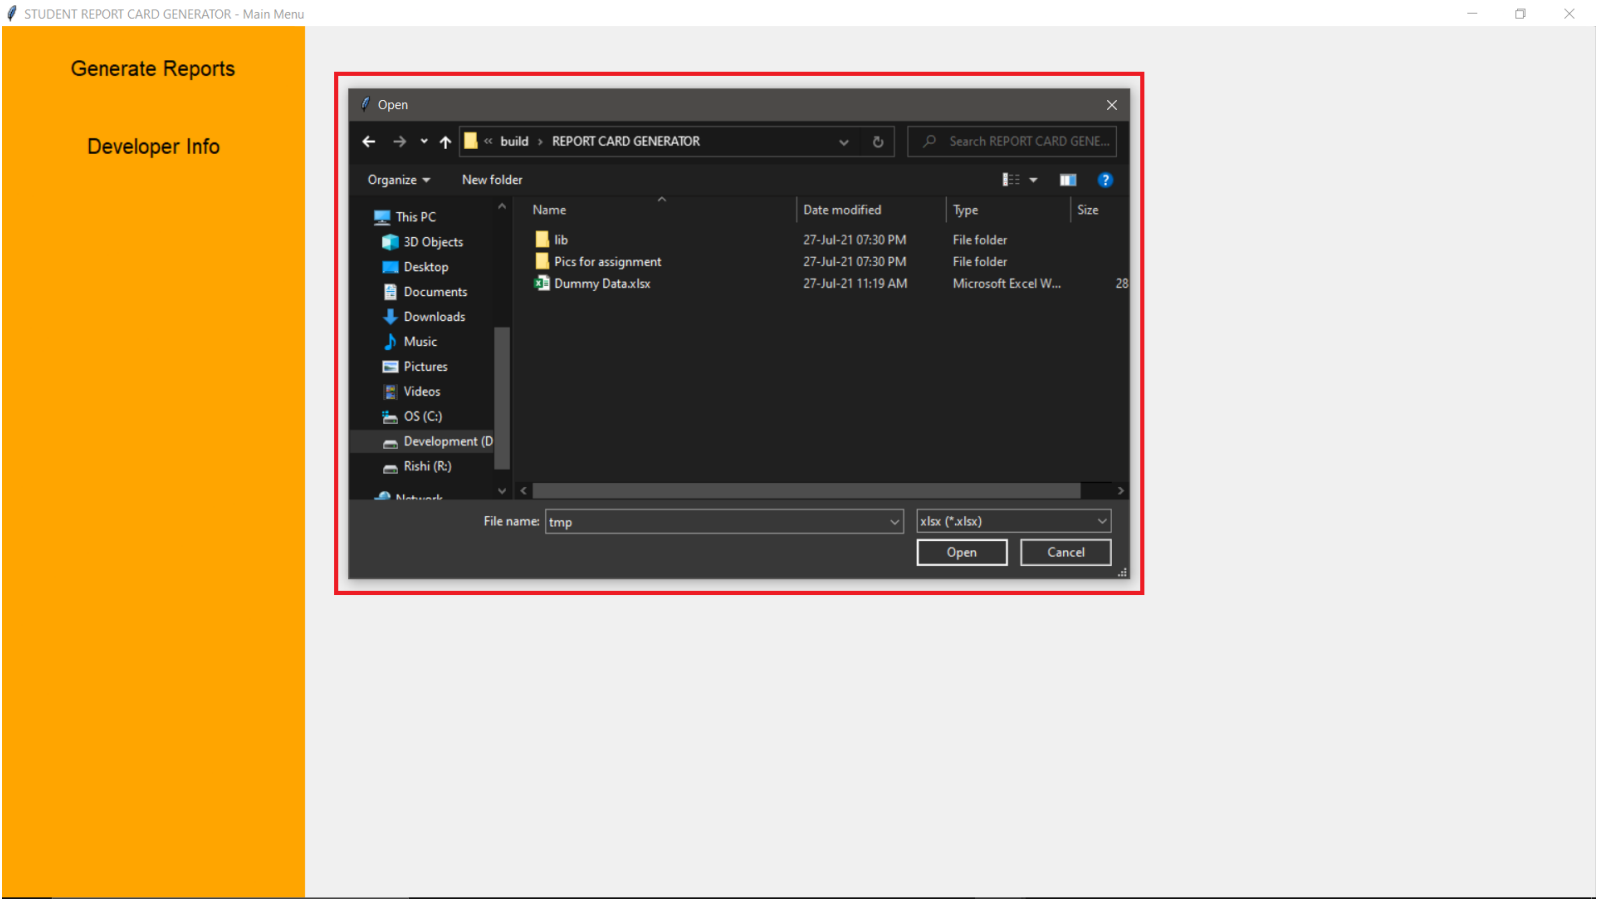

STEP 1 : Navigate to REPORT CARD GENERATOR directory and run report card generator.exe file

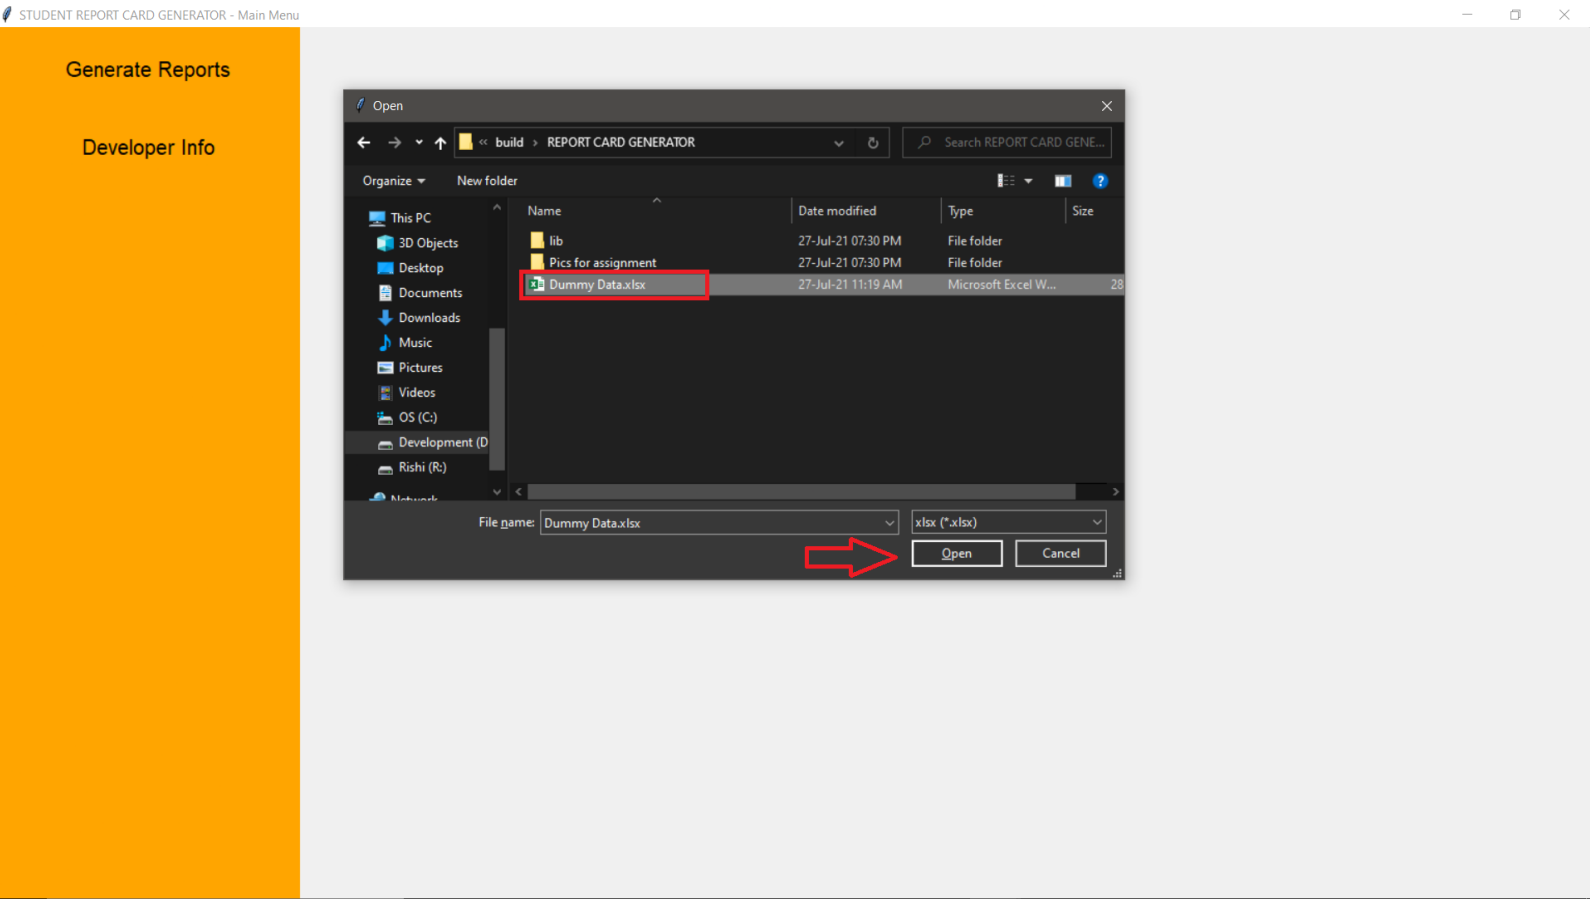

STEP 2 : You can notice a command window popping up. Do not close the command window. Now the GUI will be visible.

STEP 3 : Click on Generate Reports button. You can see a file explorer popping up.

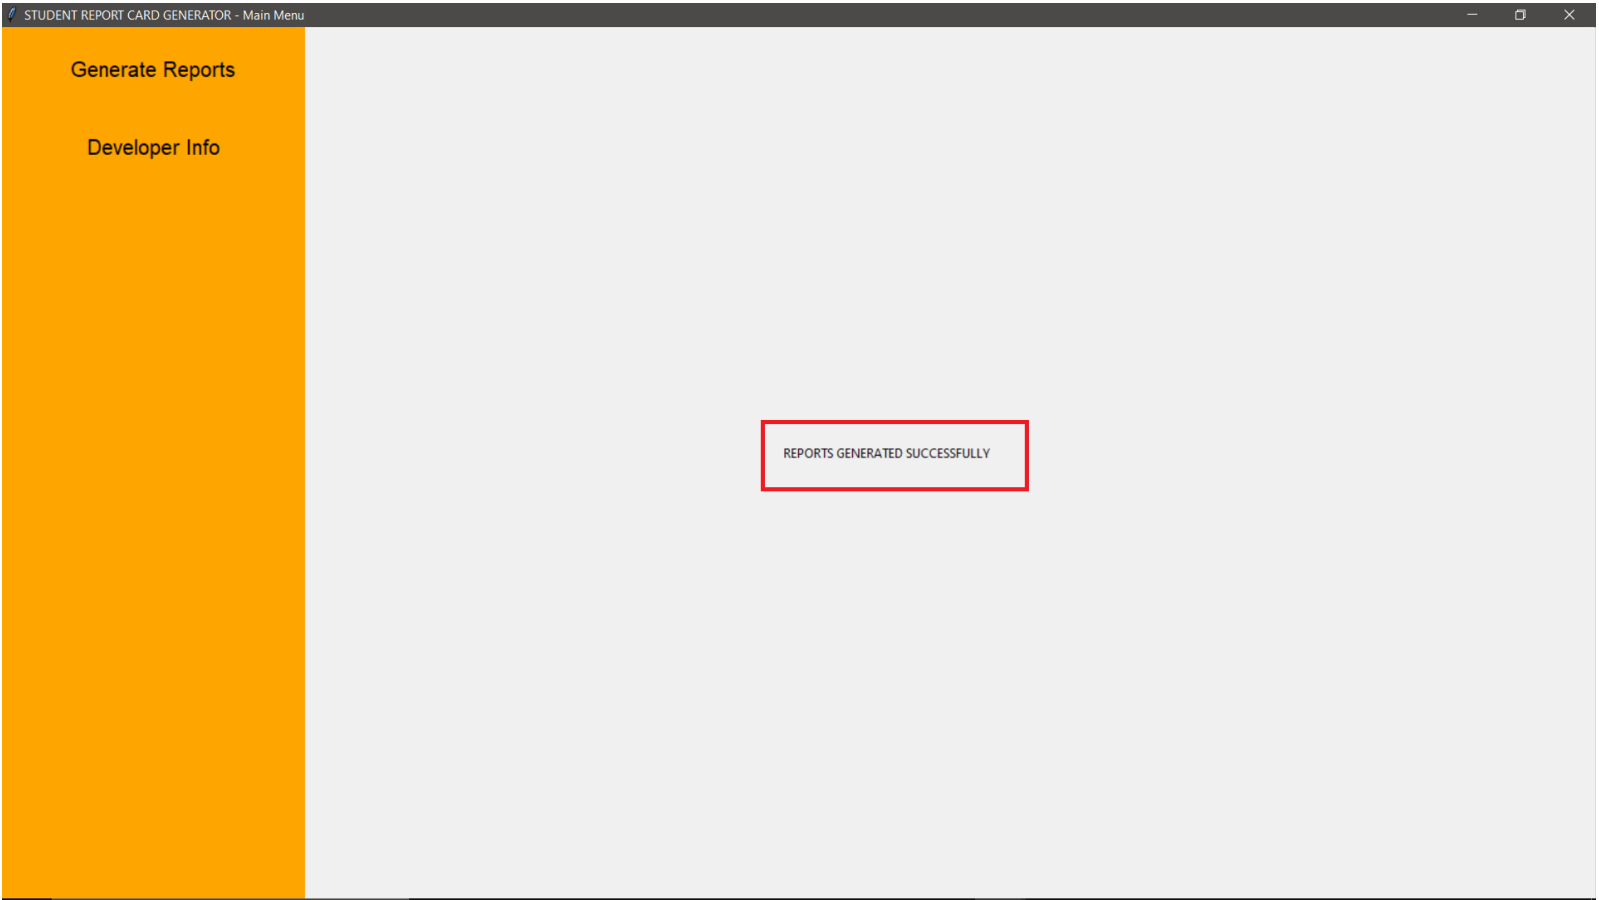

STEP 4 : Select Dummy Data.xlsx file and click on open button

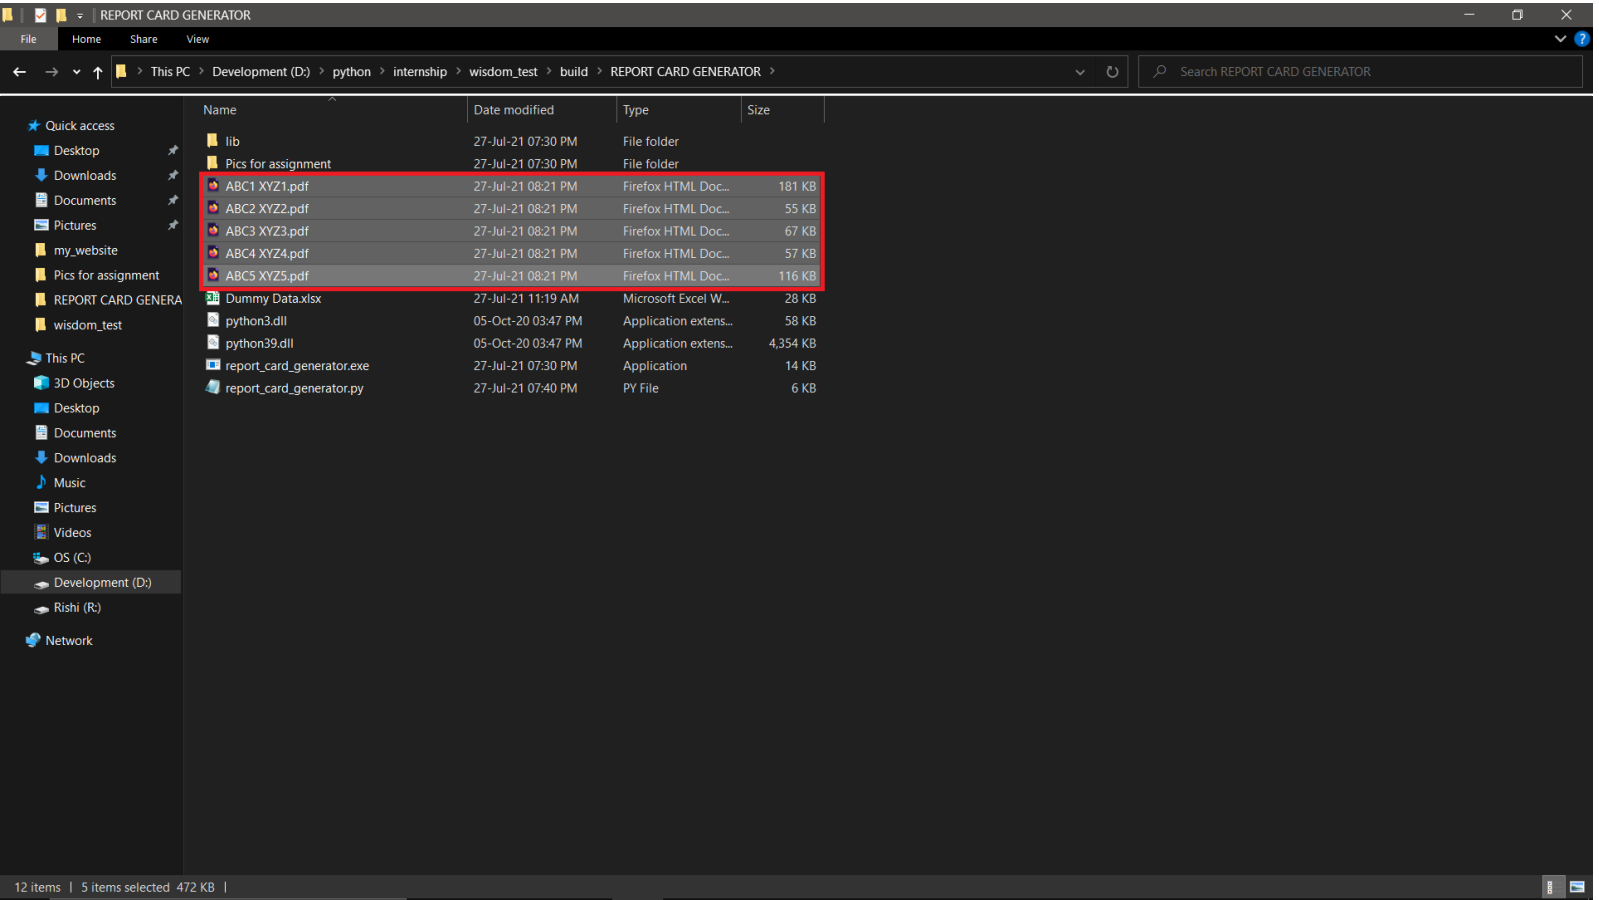

Report Card generation will start in the background. Wait till the process executes successfully

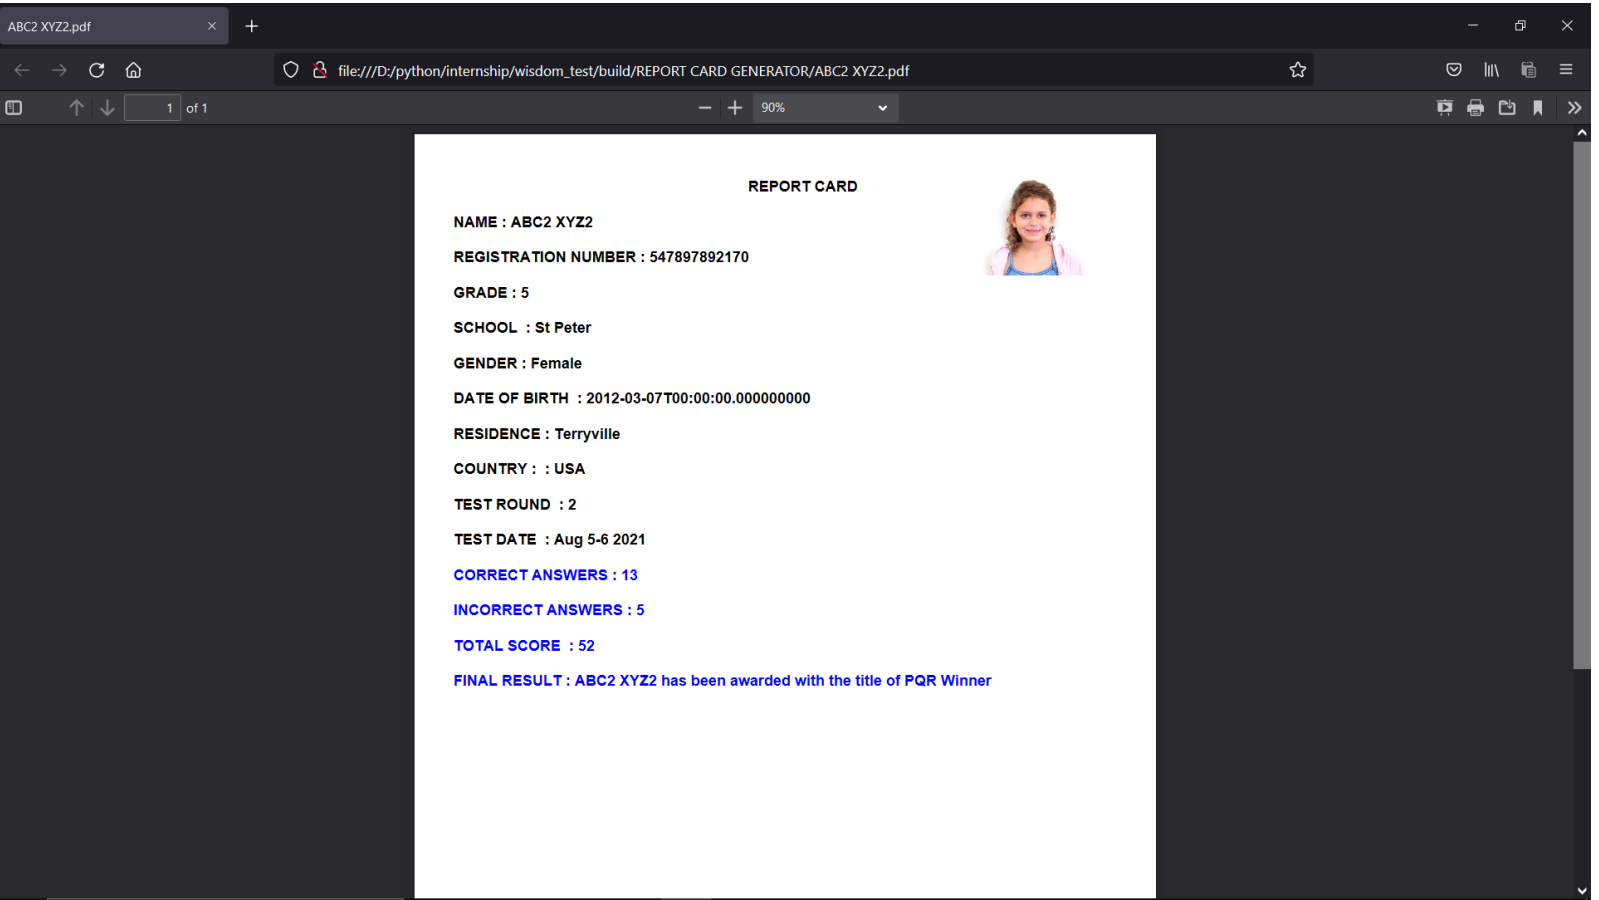

A message will be displayed on successful generation of report cards.

Report cards will be generated with student name as file name. Open the pdf file in order to see the report card.

The contents of the report card are as followed.

NOTE : The Application interface and report card format can be modified as required. Graphs depicting the student performance can be attached to the report card in future version. This application is designed in a way that it can generate any number of report cards if the data follows the exact format of Dummy Data.xlsx. This application can also be modified to generate report cards if the data is not in the same format. Modifications and other features like setting timer for auto generating report cards, sending report cards via mail, telegram, etc can be implemented as per the requirements.
